Section 12 -- Ecological Information

Product is not volatile, and is miscible with water. Concentrations of BioClean PG in the air are expected to be extremely low because of its low vapour pressure. It is readily biodegraded in water or soil (via aerobic and anaerobic mechanisms).

If a spill should occur, Foam-Brite partitions almost equally in water and soil. Relatively little will go into the air because of its low vapour pressure. Is not expected to bio-accumulate and is considered to be practically non-toxic to fish and aquatic invertebrates on an acute basis except at very high concentrations.
